Syste	ms Integration
and	Engineering
	Branch

**CODE 581** 

- Potential New Missions
  - Medium Explorers (MIDEX)
  - Small Explorers (SMEX)
  - Earth System Science Pathfinder (ESSP)
  - New Millennium
  - Triana
  - Earth Observing System Missions
  - Gamma-ray Large Area Space Telescope (GLAST)
  - Next Generation Space Telescope (NGST)
  - High Throughput X-ray Spectroscopy (HTXS)
  - Magnetospheric Multi-scale
  - Global Electrodynamics
  - Magnetosphere Constellation
- Technology Requirements

and Engineering Branch
---------------------------

**CODE 581** 

Changes from 1997

- Dropped Solar Stereo
  - to be implemented by APL
- Added Triana
- Changed EOS ALT to Icesat
- Added DS5

Syste	ms Integration
and	Engineering
	Branch

**CODE 581** 

# Changing Environment of Future Work

- Ground system and operations support may or may not involve GSFC
  - Pls may do some or all of these functions
  - Industry may provide these services
  - CSOC may provide these services
- Many missions looking for advanced technology development to lower implementation costs
- Mix of large and small missions
  - Largest is ~ \$500 million for mission development
  - Smallest is ~\$40 million for mission development
- Spacecraft missions are only one class of opportunity
  - Non-spacecraft missions instruments, balloons
  - Non-traditional work
  - Software support for other centers tools, simulators

Syste	ms Integration
and	Engineering
	Branch

#### **CODE 581**

# **Future Missions at GSFC**

### **MIDEX**

- IMAGE Imager for Magnetopause to Auroral Global Explorer
  - Launch January 2000
  - ASSIST based ground system
  - Simple operations
- Microwave Anisotropy Probe (MAP)
  - Launch mid-2000
  - In-house spacecraft
  - Ground system common with IMAGE
  - L2 orbit
  - Simple operations
- Subsequent MIDEX missions
  - Approximately 1 per year next one launches 2002
  - \$140 million total lifecycle cost cap
  - Need to compete for future missions
  - Selection of next two missions December 1998

Syste	ms Integration
and	Engineering
	Branch

# G S F C

**CODE 581** 

# Small Explorers (SMEX)

- HESSI selected for launch in 2000
  - Solar flare mission
  - Ground system and operations at University of California at Berkeley
  - Reusing ITOS for operations and spacecraft I&T
- GALEX selected for launch in 2001
  - Ultraviolet Imaging and spectroscopic survey of galaxy evolution
  - Spacecraft operations by Orbital
  - Science ops mostly at California Institute of Technology
- Future SMEX missions capped at \$71 million total life cycle costs
- Future missions are PI missions
- Next AO expected in spring 1999

Syste	ms Integration
and	Engineering
	Branch

#### **CODE 581**

## **New Millennium**

- Technology driven missions
- JPL has several deep space missions in this program
- GSFC has New Millennium-Earth Observing 1
  - Advanced technology Landsat instrument
  - MIDEX-like spacecraft
  - Launch 12/99
- NM EO-2 MSFC shuttle Lidar Demonstration (Sparcle)
- NM EO-3 currently soliciting science measurement concepts
- NM DS-5 low earth orbiting mission managed by GSFC
  - Launch 2003
  - Several candidate missions under evaluation
    - nanosat constellations
    - solar sails
    - tethers
- Future EO New Millennium missions expected every 1.5 years

Syste	ms Integration
and	Engineering
	Branch

**CODE 581** 

# Earth System Science Pathfinder (ESSP)

- \$120 M total cap spacecraft, instrument, launcher, ground system, ops
  - First one (2000)- \$60 M Vegetation Canopy LIDAR
  - Second one (2001) \$90 M GRACE (JPL)
- Next two missions to be selected in December 1998
- Approximately one per year
- PI mode missions
- Probable missions:
  - Polar or high inclination orbit
  - Low or moderate data rates (5 500 kbps)
  - Ground station communication
  - Common I&T and ops system
  - No simulator
  - Ground system located at PI site

Systems Integration and Engineering Branch	Future Missions at GSFC	G S F C
CODE 581	Triana	*
	Science/education mission	
	<ul> <li>Near real time image of sunlit earth from L1</li> <li>Updated every 15 minutes</li> <li>Data widely distributed to schools</li> </ul>	
	<ul> <li>Launch goal - July 2000</li> </ul>	
	SMEX-lite spacecraft	
	• \$75 million	
	<ul> <li>Goal of 5 years of operations</li> </ul>	

Systems Integration and Engineering Branch	Future Missions at GSFC	S F C
CODE 581	Earth Observing System (EOS)	**
	Supported by EDOS and ECS	
	<ul> <li>ECS responsible for MOC and operations through 10/2002</li> <li>EOS-AM 1 Launch mid 1999</li> <li>EOS-PM 1 Launch December 2000</li> </ul>	
	<ul> <li>EOS-Chem - 12/2002</li> <li>spacecraft common with PM-1 spacecraft</li> </ul>	
	<ul> <li>Icesat - 7/2001</li> <li>Smaller, moderate rate mission</li> </ul>	
	Post 2002 missions currently being defined	

**Systems Integration** and Engineering Branch

**CODE 581** 

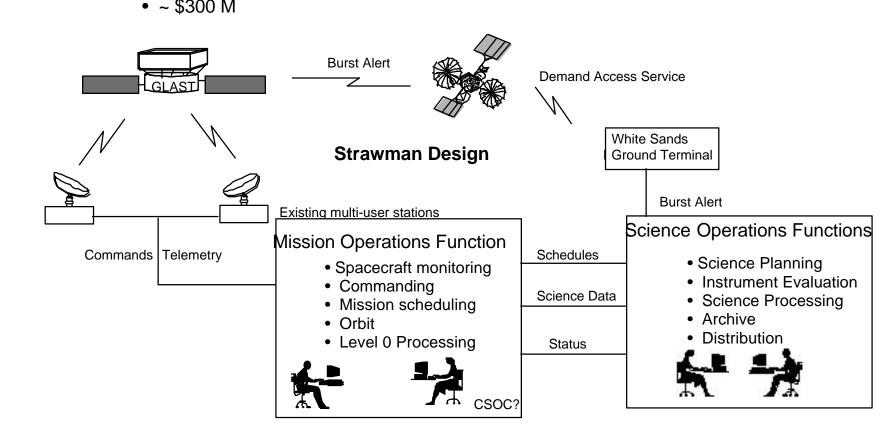

## **Future Missions at GSFC**

# Gamma-ray Large Area Space Telescope

### Gamma-ray Large Area Space Telescope (GLAST)

- Studies active galactic nuclei, pulsars, black holes, gamma ray bursts, ...
- Launch 2004
- 550 km orbit. 28.7° inclination
- Rapid communication required for gamma-ray burst alerts
- ~330 kbps average data rate
- Tight time correlation requirements (microseconds)
- ~ \$300 M

# Systems Integration and Engineering Branch

#### **CODE 581**

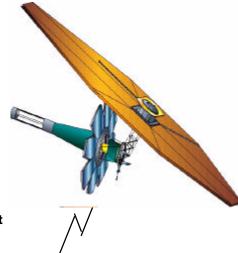

## **Future Missions at GSFC**

# Next Generation Space Telescope (NGST)

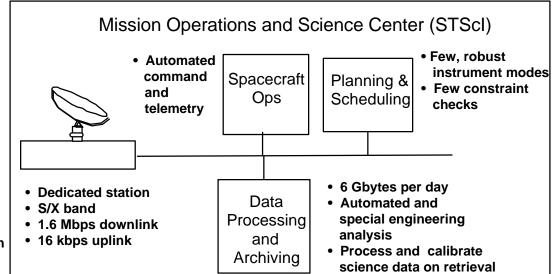

#### Flight S/W

- Common software components, standards
- File to file transfers of loads, observation data
- Simple, robust safemode
- Onboard autonomy
  - attitude
  - guide star selection
  - activity sequencing
  - momentum management
  - antenna pointing
  - telemetry filtering

- Infrared imagers to explore galaxy formation
- Launch 2008
- 8 meter deployed mirror
- Inflatable sun shield
- L2 orbit
- Dedicated ground station
- Combined science and mission ops
- 500 kbps average rate
- ~\$500 Million development cost
- 10 year lifetime

- All functions colocated
- reduced comm costs
- cross-trained ops
- common data basessingle cmd generator
- single archive
- no contention for station

Syste	ms Integration
and	Engineering
	Branch

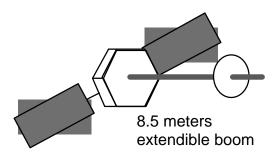

**CODE 581** 

# **Future Missions at GSFC**

## Constellation-X

- 100x increase in sensitivity for X-ray observations
- Launch around 2008
- 6 identical spacecraft/instruments
- L2 orbit
- 1 DSN contact per day
- 200 kbps average rate~\$600 million

Syste	ms Integration
and	Engineering
	Branch

**CODE 581** 

### **Future Missions at GSFC**

# Magnetosphere Multiscale

- Magnetosphere Multiscale
  - 4 identical spacecraft in tight formation
  - 2 other identical spacecraft in loose formation with each other
    - 1.2 by 10 Re, low inclination
  - Formation has several phases that include lunar swingby
    - Phase 1: 1.2 X 12 Re, low inclination
    - Phase 2: 1.2 x 30 Re, low inclination
    - Phase 3: 8 x 235 Re, variable inclination
    - Phase 4: 10 x 50 Re, 90° inclination
  - Spacecraft separation varies from 10 km to 10 Re
  - Several Gbits per spacecraft per day
  - Interspacecraft communication/ranging possible
  - Launch 2005
  - ~\$120 M
  - Ops overlap with other sun-earth connection missions
    - Possible common information system

Systems Integration and Engineering Branch	Future Missions at GSFC	S F C
<b>CODE 581</b>	Global Electrodynamics	*
	<ul> <li>Iobal Electrodynamics</li> <li>4 spacecraft in polar orbit</li> <li>3 in identical orbit, one one hour different</li> <li>Dip below 150 km once per day</li> <li>Launch 2007</li> </ul>	

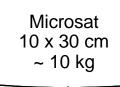

Systems Integration and Engineering Branch

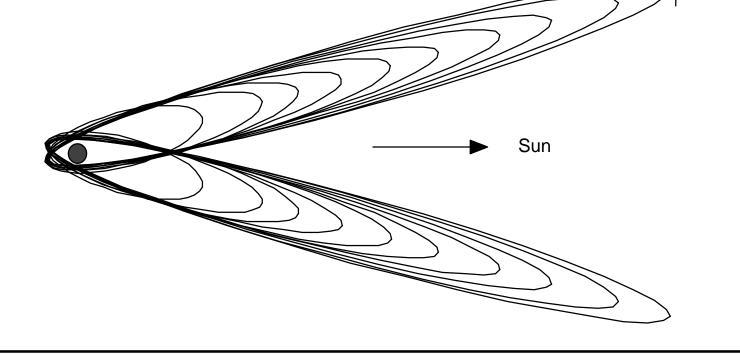

# Future Missions at GSFC Magnetosphere Constellation

**CODE 581** 

- Magnetosphere Constellation
  - up to 100 microsats in a variety of orbits 3 Re to ~60 Re
  - Communications at perigee only
  - Potential for intersatellite communication
  - Launch 2008
  - ~\$120 M
  - Ops overlap with other sun-earth connection missions
    - Possible common information system

<b>Systems Integration</b>			
and	Engineering		
	Branch		

# G S F C

**CODE 581** 

# Missions under Study

- Space Science Missions for late in the next decade
  - ARISE VLBI radio astronomy mission, 25 m radio telescope
    - Under study by JPL
    - Data rates of ~8 Gbps
  - LISA Gravity wave mission
    - Under study by JPL
    - 3 spacecraft, interspacecraft ranging
  - OWL Study highest energy particles
    - 2 spacecraft
    - GSFC study
- Advanced technology geosynchronous earth observing missions

<b>Systems Integration</b>				
and	Engineering			
	Branch			

# G S F C

**CODE 581** 

# **Technology Needs**

- Most of the larger missions intend to make significant investments in technology to lower development and operations costs
- Other sources of funding available for technology for the lower cost missions
- Technology needs:
  - Formation flying
  - Operations of large number of similar or identical spacecraft
  - Testing of large number of similar or identical spacecraft
  - Autonomous operation
  - Rapid, on demand data communication
  - Low cost systems
  - Flexible, evolutionary science information systems
  - Standards-based space/ground communication
  - Lower cost flight software approaches
  - Higher bandwidth uplinks
  - Tools to reduce costs to support science users
  - Interspacecraft communication
